

Mexican Sunflower

Compact 28- to 30-inch plants are simply drenched in big orange blooms all summer!

Masses of 2- to 3-inch deep orange blooms arise all summer long. As they fade, they are quickly replaced by new blooms, so the plant always looks neat and freshly-blooming!

This plant is impervious to heat, humidity, drought, and even deer. Butterflies love it. Plant this sun-lover in the blazing-hot garden and enjoy the long summer show!
